1. Introduction

PMC2 is the high performance PCI interface card designed for Laser Marking System. The card supports digital galvo motor, compatible with XY2-100 protocol, and through DA2-16 daughter board can control analog galvo motor precisely. It reserves plenty I/O points for flexibly connect with automatic equipment or lasers requiring additional I/O. PMC2 features complete stepper motor and servo motor control function, and can control four axes at the same time. Besides, it provides a variety of expanded boards for all kinds of connection requirements.

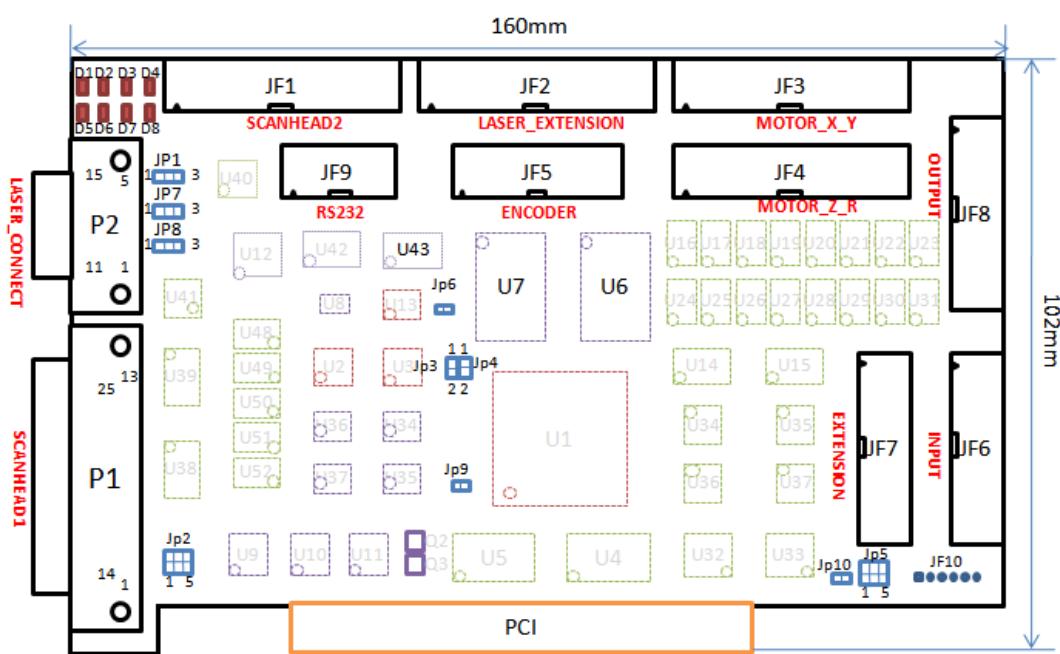

1-1 Specification

- ◆ Built-in DSP, marking computing do not occupy computer CPU time.
- ◆ Support one 16Bit XY2-100 digital control signal output, 10 μ s cycle update galvo motor position.
- ◆ FPK, PPK, R05 first pulse suppression.
- ◆ Two 10-bits analog control signals.
- ◆ 3-way encoder inputs, 3-way XY2-100 channel for XYZ signals.
- ◆ PWM maximum output frequency is 10MHz, minimum pulse width is 0.08 μ s.
- ◆ 4-way Pulse/Direction digital step/servo motor control signals at the same time, the maximum output frequency is 2MHz.
- ◆ General 16-bits digital outputs, 16 bit digital inputs.
- ◆ Specific 16-bits laser control digital outputs.
- ◆ Support for Windows XP/2000/Vista/Windows 7.

1-2 Appearance

1-3 Layout

| Name | Purpose | Descriptions |
|-----------|-----------------|--|
| P1 | SCANHEAD1 | Main marking port (D-SUB 25-Pin female connector) |
| P2 | LASER_CONNECTOR | Laser control and analog output port (D-SUB 15-Pin female connector) |
| JF1 | SCANHEAD2 | DA2-16 board interface port (26-Pin box header connector) |
| JF2 | LASER_EXTENSION | Extension laser control and 16-bit digital output port (26-Pin box header connector) |
| JF3 | MOTOR_X_Y | XY Table port (26-Pin box header connector) |
| JF4 | MOTOR_Z_R | Z-axis and rotary port (26-Pin box header connector) |
| JF5 | ENCODER | XYZ encoder port (16-Pin box header connector) |
| JF6 | INPUT | 16-bit digital input port (20-Pin box header connector) |
| JF7 | EXTENSION | Extension 16-bit digital output port (20-Pin box header connector) |
| JF8 | OUTPUT | 16-bit digital output port (20-Pin box header connector) |
| JF9 | RS232 | RS232 port (10-Pin box header connector) (Reserved port) |
| JP1 | JUMPER1 | LASER2 (FPH or R05) |
| JP2 | JUMPER2 | PMC2 card ID |
| JP3 | JUMPER3 | LASER1 reverse output (PWM reverse) |
| JP4 | JUMPER4 | LASER2 reverse output (FPK reverse) |
| JP7 | JUMPER7 | Analog Out1 voltage setting (0~+5V or 0~+10V) |
| JP8 | JUMPER8 | Analog Out2 voltage setting (0~+5V or 0~+10V) |
| JP6, 9,10 | JUMPER6, 9, 10 | For testing |

2. Pin Assignment

2-1 Laser Control Connector

2-1-1 P1 (SCANHEAD1): XY2-100 Interface Port

| 25-pin Female Connector | Pin | Descriptions |
|--|------------|---------------------------|
| | (-) (+) | |
| DO NOT CONNECT (25) GND (24) GND (23) DO NOT CONNECT (22) /STATUS1+ (21) DO NOT CONNECT (20) STATUS+ (19) (optional) CHAN3+ (18) CHAN2+ (17) CHAN1+ (16) SYNC+ (15) CLOCK+ (14) | 1 14 | Differential Out (CLOCK) |
| | 2 15 | Differential Out (SYNC) |
| | 3 16 | Differential Out(CHAN1) |
| | 4 17 | Differential Out (CHAN2) |
| | 5 18 | Differential Out (CHAN3) |
| | 6 19 | Differential In (STATUS) |
| | 8 21 | Differential In (/STATUS) |
| | 11, 23, 24 | GND |

2-1-2 P2 (LASER_CONNECTOR): Laser Control Port

| 15-pin Female Connector | Pin | Descriptions |
|-------------------------|--|--------------|
| 1 | Analog Out1 | |
| 2 | Analog Out2 | |
| 3 | GND2 [1] | |
| 4 | Laser1 (PWM) [2] | |
| 5 | Laser2 (FPK) or R05 [2] | |
| 6 | L0 (Laser On/Off) | |
| 7 | L1 (Leading Light On/Off) | |
| 8 | L2 (Shutter) | |
| 9 | L3 (CW select) | |
| 10 | L4 (Lamp On/Off) | |
| 11 | L5 (Start power saving mode) | |
| 12 | /START (Dry connect input) (Let Pin12 & Pin15 short-circuit will get START signal) | |
| 13 | /STOP(Dry connect input) (Let Pin13 & Pin15 short-circuit will get STOP signal) | |
| 14 | +5V | |
| 15 | GND [1] | |

※[1]GND is digital and GND2 is analog. If no need to distinguish, they can connect with each other.

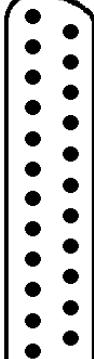

※[2]The output signal of Laser1 and Laser2 depend on the selected laser control mode.

| | CO₂ Mode (JP1: 1, 2 Close) | YAG Mode (JP1: 1, 2 Close) | RO5 (JP1: 2, 3 Close) |
|--------|--|-----------------------------------|------------------------------|
| Laser1 | Modulation Pulse 1 | Q-Switch signal | Q-Switch signal |
| Laser2 | Modulation Pulse 2 | First Pulse Killer | Analog out R05 |

2-1-3 JF1 (SCANHEAD2): DA2-16 Board Interface Port

| 26-Pin Connector | Pin | | Descriptions |

| | | 15 | | +5V |
| | | 16 | | +12V |

2-3-2 JF6 (INPUT): TTL Input Port

When there is no any connection to TTL input, the program receives 0 value; while if input 0V, the program will read 0, if input 5V, the program will read 1. You must consider about the noise issue. The pin assignment of JF6 connector is compatible to the general purpose input daughter boards such as PCLD-782 of Advantech Co., Ltd. or the DB-16P of ICPDAS Co., Ltd. Using these kinds of daughter boards can isolate power source while provide protection and easy cable connections.

| Pin | Name | Descriptions | 20-pin Connector | |

| 11 | General Digital Output 27 | (Reserved for laser control) | |
| 12 | General Digital Output 28 | (Reserved for laser control) | |
| 13 | General Digital Output 29 | (Reserved for laser control) | |
| 14 | General Digital Output 30 | | |
| 15 | General Digital Output 31 | | |
| 16 | General Digital Output 32 | | |
| 17 | GND | | |
| 18 | GND | | |
| 19 | +5V | | |
| 20 | +12V | | |

2-3-4 JF8 (OUTPUT): TTL Output Port

As for the output of TTL, when an output is set as inactive in the software; the output voltage is 0V. When an output is set as active in the software; the output voltage is 5V. The pin assignment of JF8 connector is compatible to the general purpose relay output boards such as PCLD-885 of Advantech Co., Ltd. or the DB-16R of ICPDAS Co., Ltd. Using these kinds of daughter boards can isolate external power and drive the peripheral devices more powerfully, it provides benefits of protection and easy cable connections.

| 16 | General Digital Output 16 | Marking End | | |
| 17 | GND | | | |
| 18 | GND | | | |
| 19 | +5V | | | |
| 20 | +12V | | | |

2-3-5 JF9 (RS232): RS232 Port

| 10-pin Connector | | Pin | Descriptions |
|--|---------|-----|--------------|
| CD (1)  | (2) DSR | 1 | CD |
| | | 2 | DSR |
| | | 3 | RXD |
| | | 4 | RTS |
| | | 5 | TXD |
| | | 6 | CTS |
| | | 7 | DTR |
| | | 8 | R1 |
| | | 9 | GND |
| | | | |

2-4 JUMPER Settings

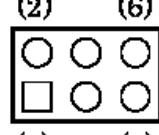

2-4-1 JP1: Set Laser2 Mode

| Jumper | Pin | Function |
|---|------------|--------------|
|  | 1, 2 Close | LASER2 (FPK) |
| | 2, 3 Close | LASER2 (R05) |

2-4-2 JP2 (PMC2 Card ID): Distinguish PMC2 from other PMC2s

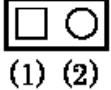

Card ID: for distinguish one card from other cards when using more than one PMC2.

XY exchange: the XY2-100 output of CHAN1(X) and CHAN2(Y) of P1 and JF1 exchange.

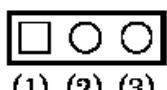

| Jumper | Pin | Function |
|---|------------|-----------------|
|  | 1, 2 Open | XY not exchange |
| | 1, 2 Close | XY exchange |
| | 3, 4 Open | Bit1: 0 |
| | 3, 4 Close | Bit1: 1 |
| | 5, 6 Open | Bit2: 0 |
| | 5, 6 Close | Bit2: 1 |

| Bit1 Bit0 | Card ID | Bit1 Bit0 | Card ID |
|-----------|---------|-----------|---------|
| 00 | 0 | 10 | 2 |
| 01 | 1 | 11 | 3 |

2-4-3 JP3 & JP4: Set PWM & FPK Signal Polarity

| Jumper | Pin | Function |
|--|------------|-------------|
|  (1) (2) | 1, 2 Close | LOW active |
| | 1, 2 Open | HIGH active |

2-4-4 JP7 & JP8: Set Analog Out 1 & Out 2 Voltage Range

| Jumper | Pin | Function |
|--|------------|----------|
|  (1) (2) (3) | 1, 2 Close | +10V |
| | 2, 3 Close | +5V |

**Warning: If JP7 or JP8 do not connect with any JUMPER, it will output +10V.

2-5 LED Status Descriptions

| Name | Descriptions |
|------|-----------------------|
| D1 | Power +3.3V indicator |
| D2 | Power +2.5V indicator |
| D3 | Power +1.2V indicator |
| D4 | Ready |

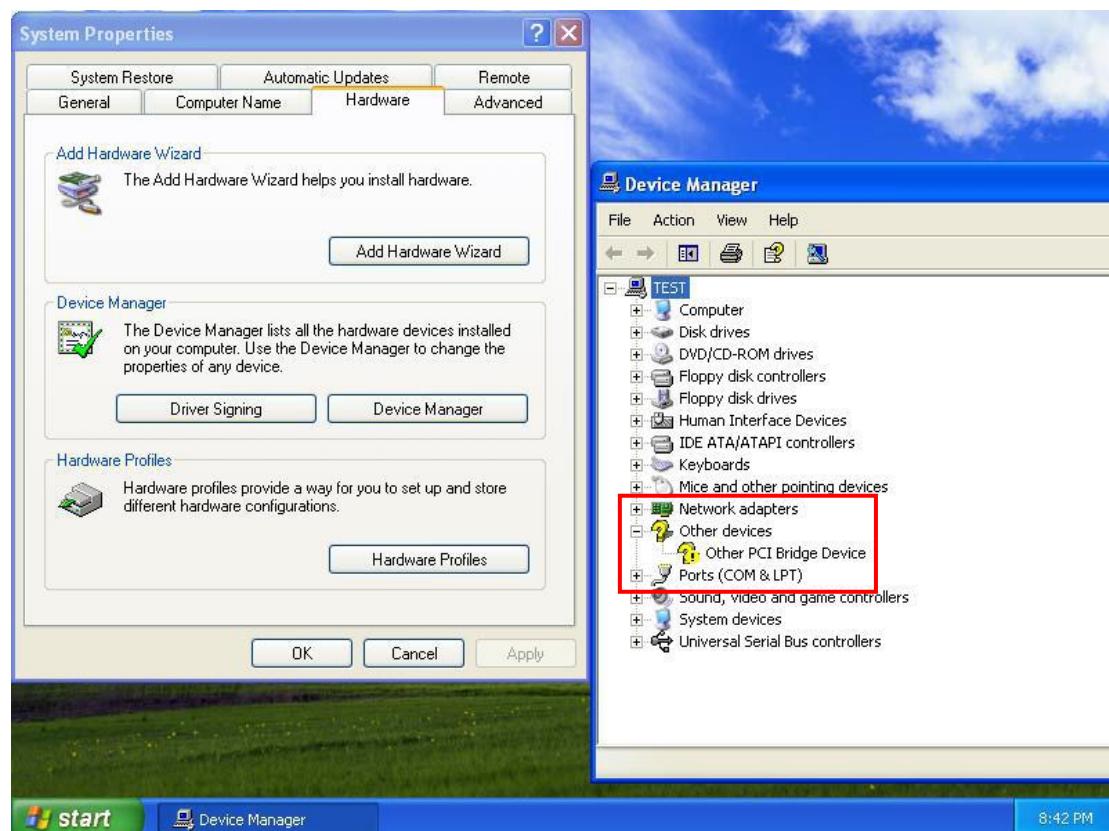

3. Installation and Cable Connection

3-1 PMC2 Installation

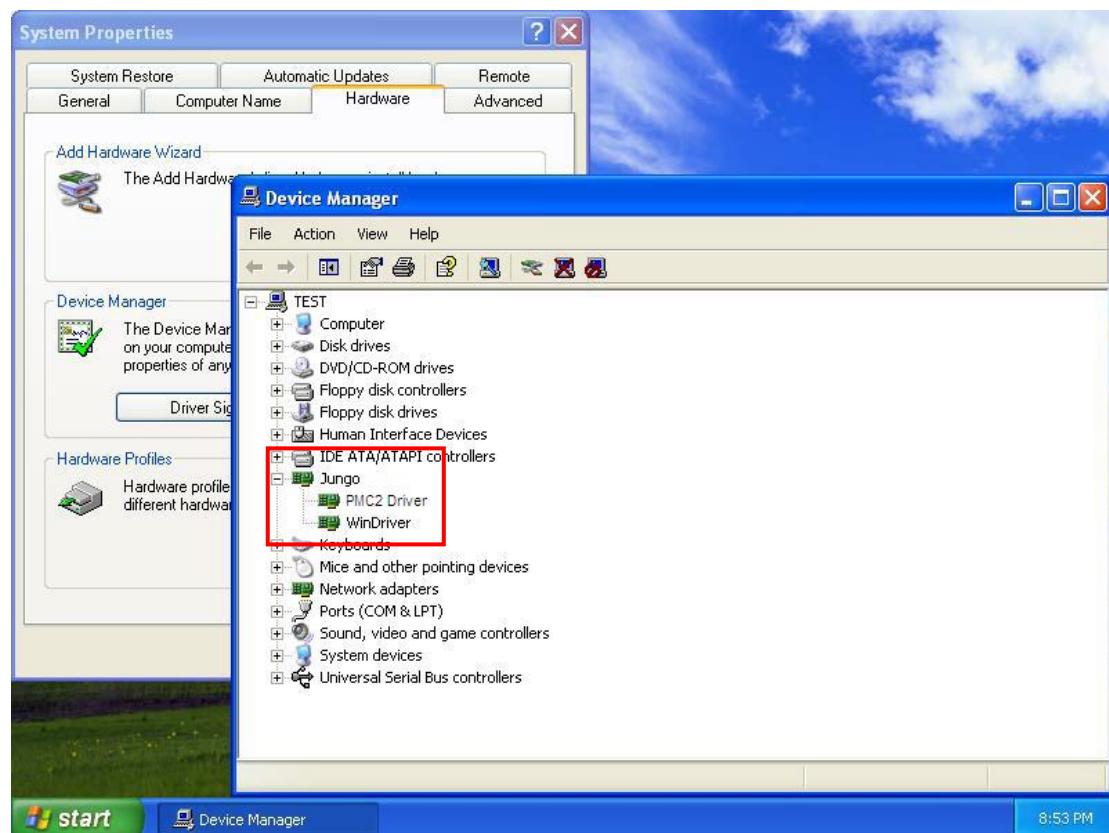

Before plugging PMC2 card into computer, be sure that the PC has been shut down. It is better to switch the power supply to 'OFF' or disconnect the power cord. After finish the above actions, plug-in the PMC2 card to the PCI slot and then restart the computer.

Normally, the MarkingMate program can work properly and can control the laser machine through PMC2 card at this moment. However, if you execute the 'Mark' function in the program, and a warming message of 'Exceed the Mark Area' appeared even though your object did not exceed the Mark Area; it could be that the PMC2 card did not insert well into the PCI slot. Please shut down the PC, pull out and re-plug the card.

If you find [Unknown PCI Device] in the window of [Device Manger] as below, it means that the PMC2 card did not install well. Please delete the [PCI Device] item and reinstall PMC2 card.

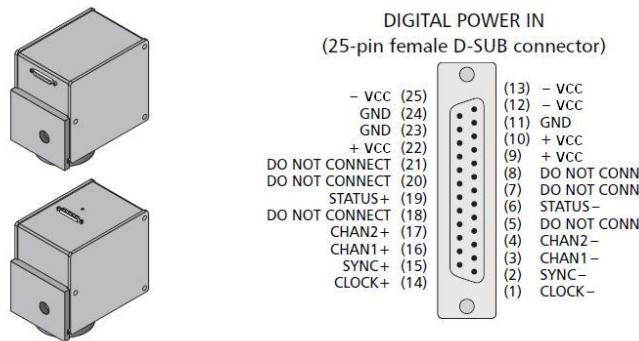

If the PMC2 card installed well, you should see a [PMC2 Driver] item in the [Device Manager] as below:

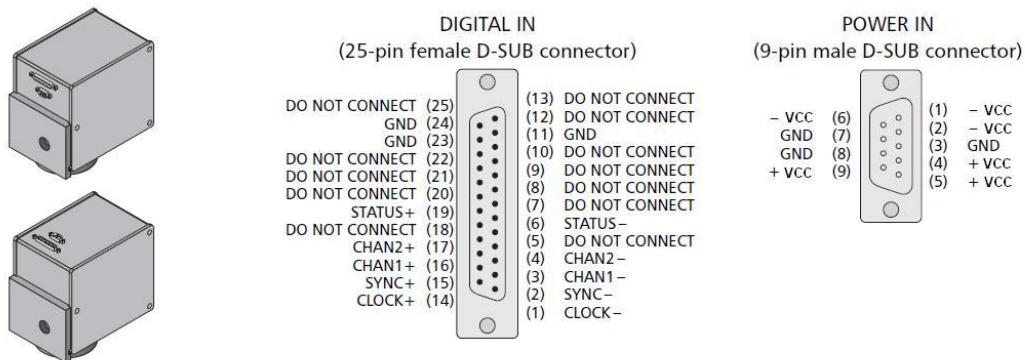

3-2 XY2-100 Digital Scanner

Currently common seen digital galvanometer could divide into the following 2 types:

3-2-1 Type 1: With one D-SUB 25Pin connector

3-2-2 Type 2: With D-SUB 25Pin connector + D-SUB 9Pin connector

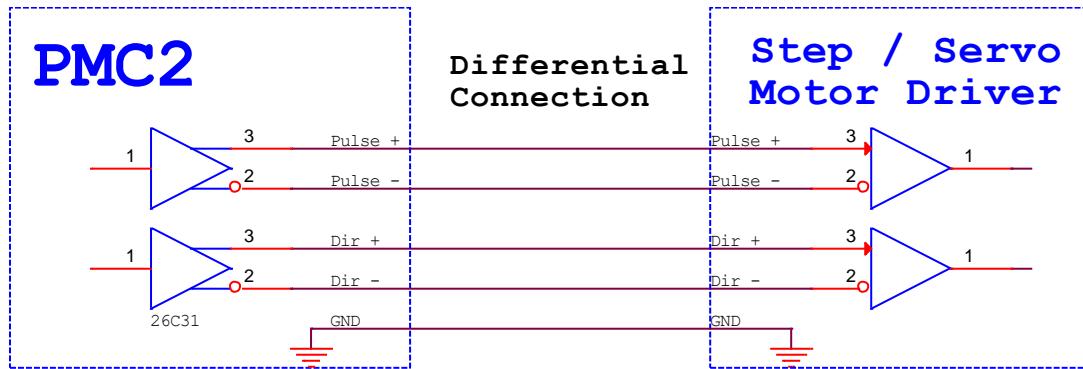

Notice:

- PMC2 P1 is corresponding to digital galvanometer D-SUB25Pin. User could easily connect them by 25-pin 1 to 1 cable; however, if using type 1 galvanometer, user has to wire to power source from the cable.
- For the power source: User has to wire all pins of them, which means has to wire 3 pins of the +VCC, 3 pins of the - VCC, and 3 pins of the GND. **Only wire to 1 pin of +VCC, 1 pin of - VCC, or 1 pin of GND is forbidden.**

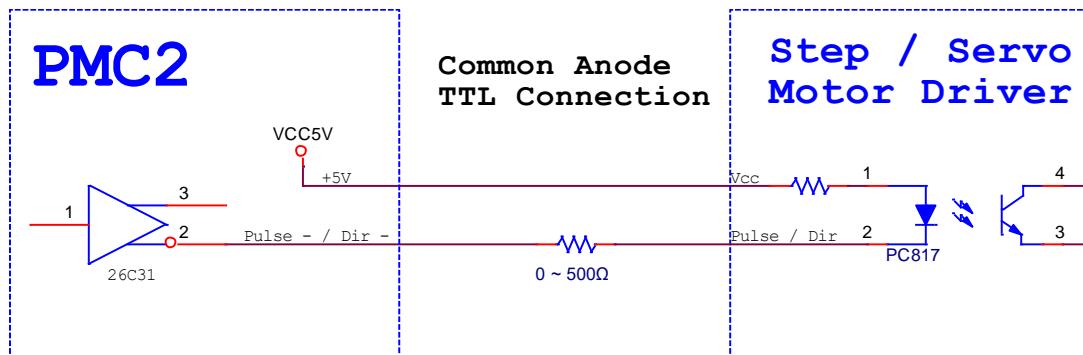

3-3 Pulse/Direction Signal Connection

According to the different types of Motor Driver, there are three ways of connection between Motor Driver and PMC2's JF3 and JF4 connectors.

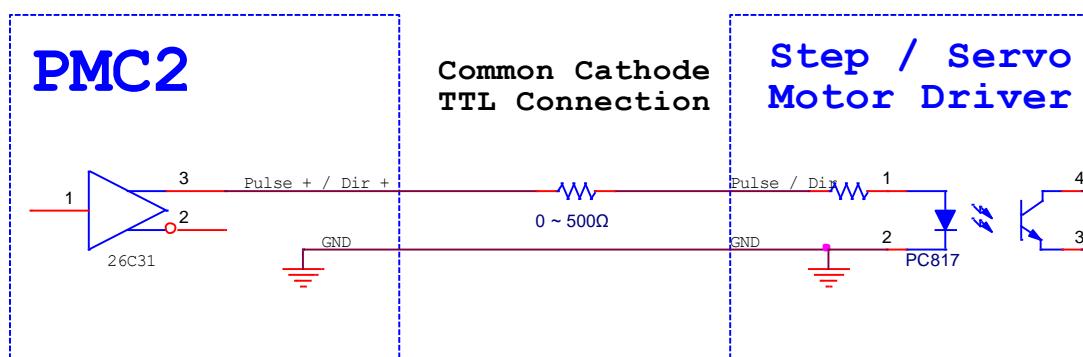

3-3-1 Differential Signal

3-3-2 Common Anode TTL

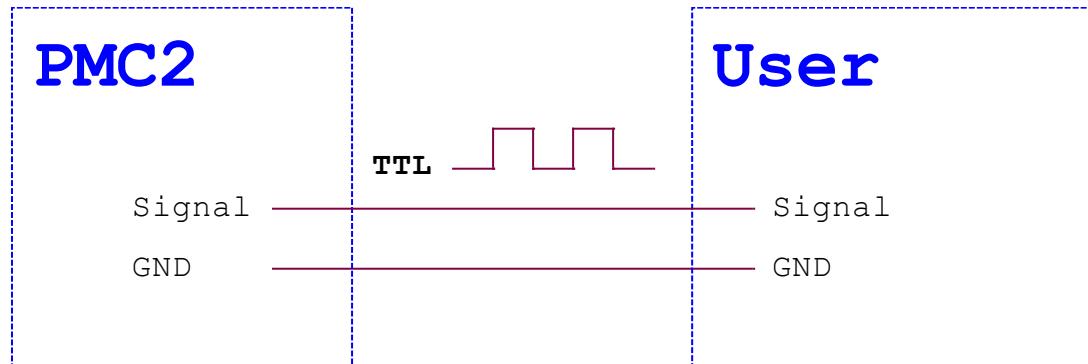

3-3-3 Common Cathode TTL

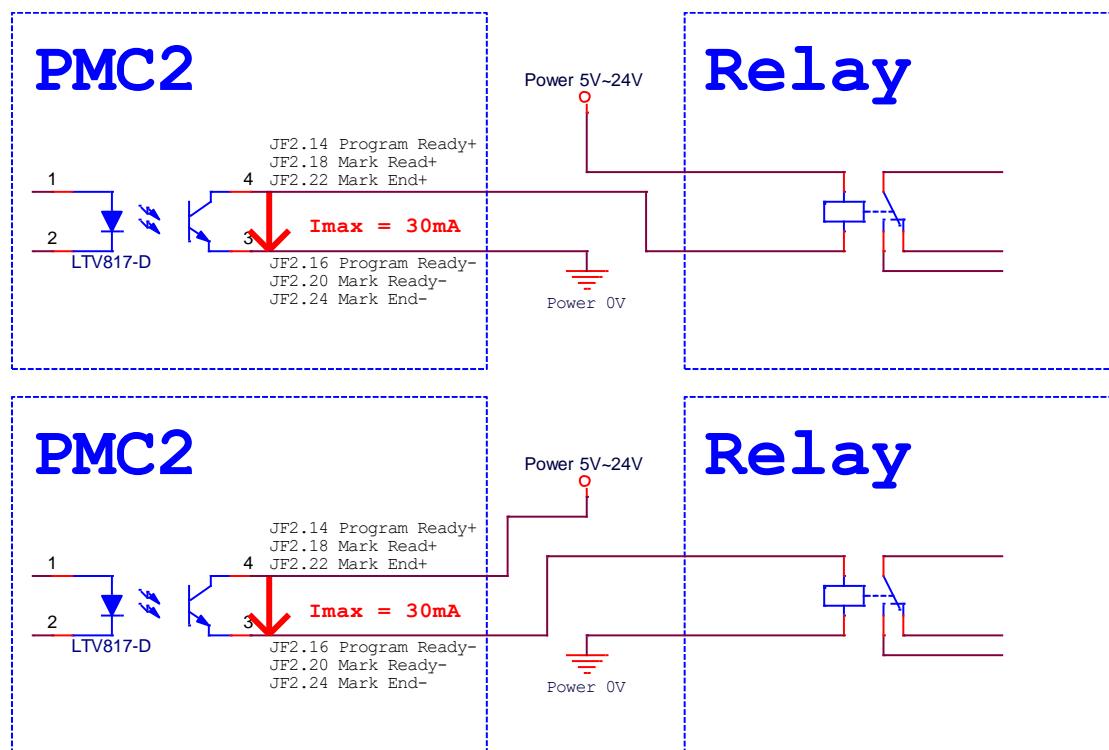

3-4 TTL Signal Connection

TTL signal is connected by pin to pin as below.

3-5 Photo Couple Signal Connection

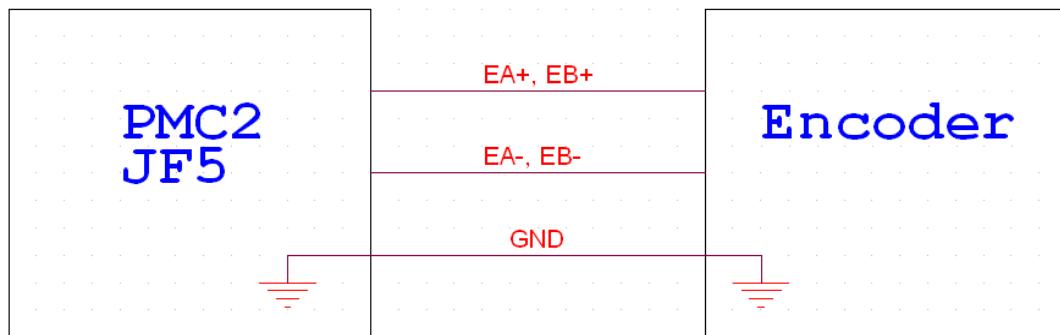

Program Ready / Marking Ready / Marking End signal are photo couple signal. The way of connection is as below.

P.S.1: The max electric current for PC817 pin4 to pin3 is 40mA. If needed more than 40mA for the relay, user will have to add external current enlarge circuit.

3-6 Encoder Signal Connection

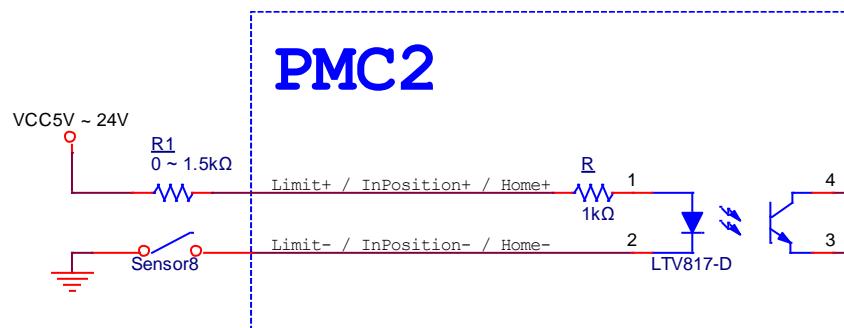

The way of encoder signal connection is as below.

3-7 Axis Control Signal Connection

The way of Axis Control signal such as Limit, InPosition and Home signal connection are as below.

3-7-1 Basic Circuit

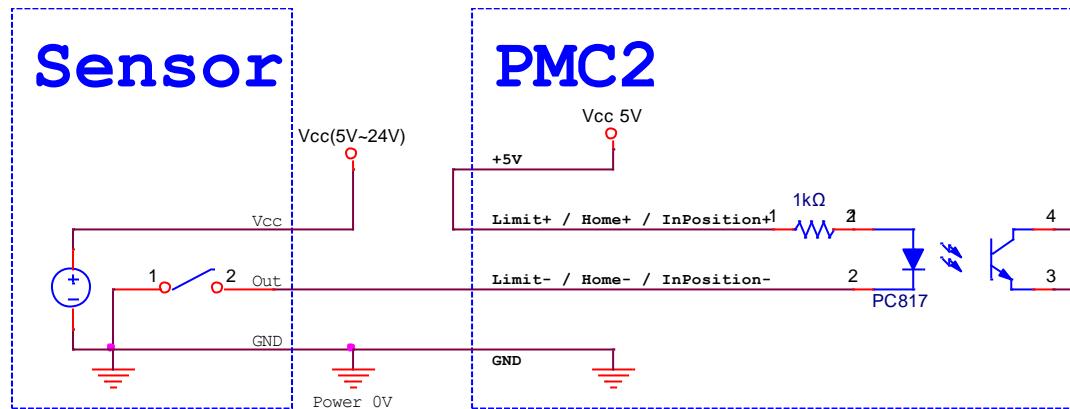

#Table 1

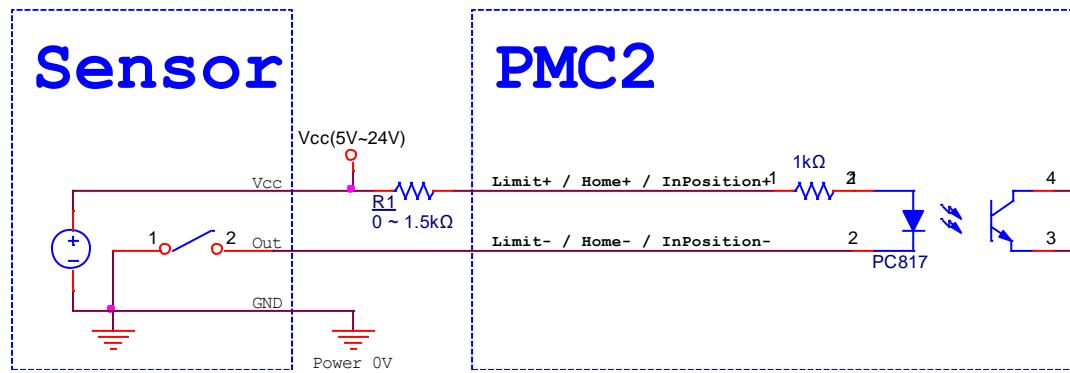

| | |
|----------------------|-----------------|
| $5V \leq VCC < 10V$ | $R1 = 0\Omega$ |
| $10V \leq VCC < 20V$ | $R1 = 1k\Omega$ |
| $20V \leq VCC < 30V$ | $R1 = 2k\Omega$ |

3-7-2 Common Cathode Sensor

3-7-2-1 Internal Power Supply Connection

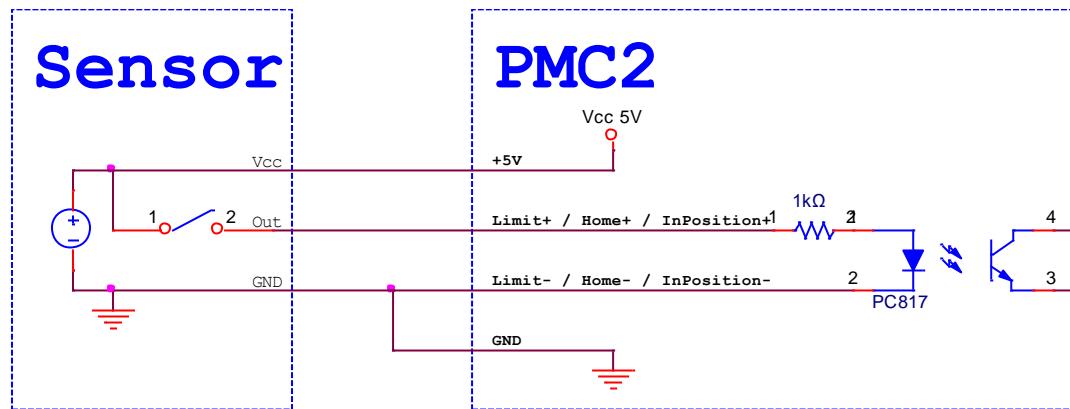

3-7-2-2 External Power Supply Connection (VCC and R1 please refer to Table 1)

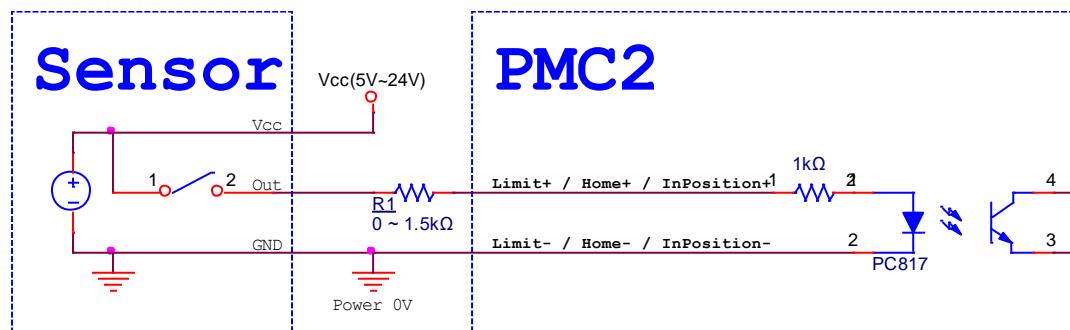

3-7-8 Common Anode Sensor

3-7-3-1 Internal Power Supply Connection

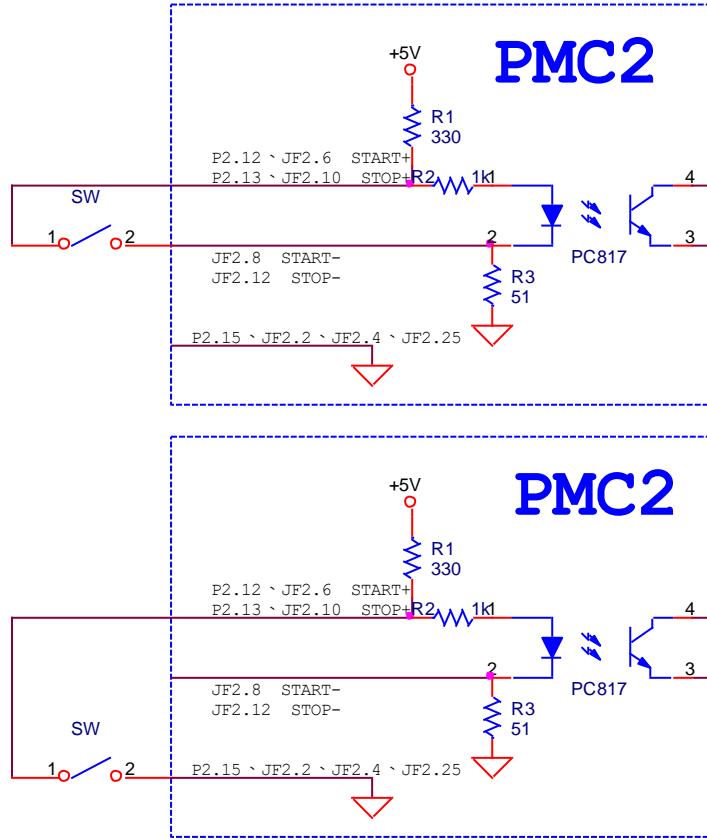

3-7-3-2 External Power Supply Connection (VCC and R1 please refer to Table 1)

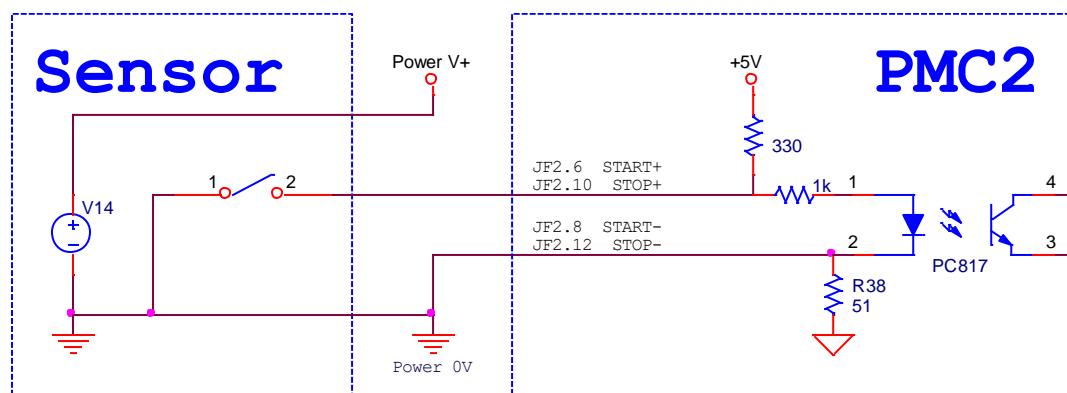

3-8 Start & Stop Signal Connection

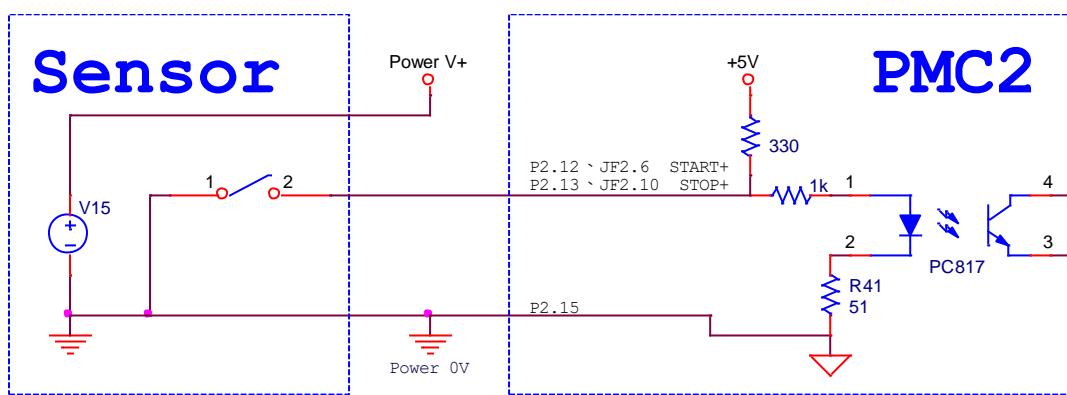

3-8-1 Connect with general buttons:

3-8-2 Connect with sensors:

3-8-2-1 For Common Cathode Sensor, short circuit the sensor output with GND.

3-8-2-2 For Common Anode Sensor, short circuit the sensor output with Vcc.

P.S. : UMC4 don't support common cathode sensor.

4. SPI Laser Settings

4-1 SPI Laser – Program Settings

If you want to use MarkingMate software to control SPI Laser, you have two ways to make it.

4-1-1 Software control interface

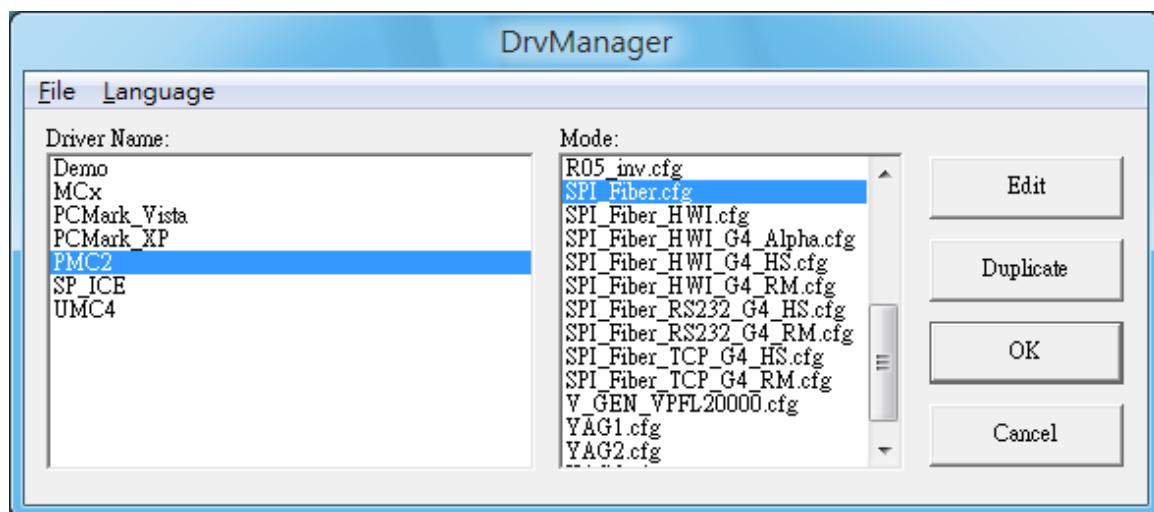

We recommend user to use software control mode to control SPI fiber laser by PMC2. By this mode user only have to connect to laser Break Out Board(BOB) by RS-232 cable and Gate signal.

The RS-232 port located on BOB which is needed to connect to COM port located on PC. If there is no such a COM port on PC, user could use a [USB to COM port convertor] to help.

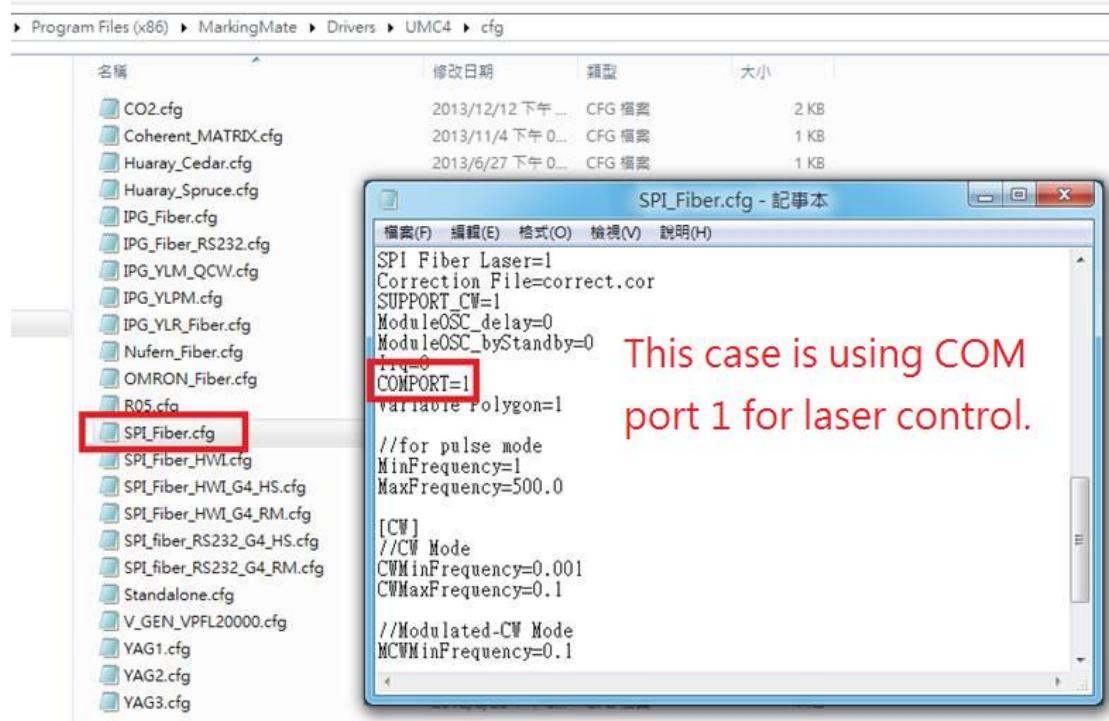

To connect [Gate] signal, user will need to prepare one BNC cable, which one side is connected to BOB [Gate], another side is connected to PMC2 JF2 pin 9 for laser on and pin 2 for ground.

After wiring is completed, user have to set cfg file to SPI_Fiber.cfg by \markingmate\DM.exe and edit [COMPORT = (the current COM port you are using)] within SPI_Fiber.cfg by any text editor.

Please refer to the following picture and cfg list:

| | |
|---------------------------|---------------------------------------|
| SPI_Fiber.cfg | For G3 laser. |
| SPI_Fiber_RS232_G4_HS.cfg | For G4 HS laser controlled by RS232. |
| SPI_Fiber_RS232_G4_RM.cfg | For G4 RM laser controlled by RS232. |
| SPI_Fiber_TCP_G4_HS.cfg | For G4 HS laser controlled by TCP/IP. |
| SPI_Fiber_TCP_G4_RM.cfg | For G4 RM laser controlled by TCP/IP. |

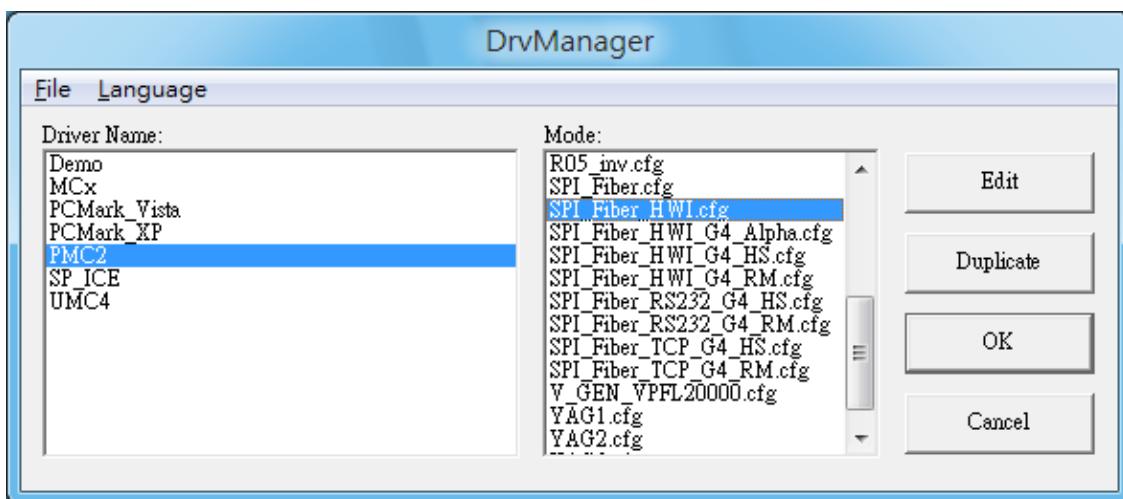

4-1-2 Hardware control interface

If user has to pursue highest performance for laser control, definitely have to use hardware control mode. Please refer to the following [4-2-2 Hardware connection mode(HWI)] for wiring.

After wiring is completed, user have to set cfg file to SPI_Fiber_HWI.cfg or other suitable cfg by \markingmate\DM.exe.

Please refer to the following picture and cfg list:

| | |
|----------------------------|---------------------|
| SPI_Fiber_HWI.cfg | For G3 laser |
| SPI_Fiber_HWI_G4_Alpha.cfg | For G4 Alpha laser. |
| SPI_Fiber_HWI_G4_HS.cfg | For G4 HS laser. |
| SPI_Fiber_HWI_G4_RM.cfg | For G4 RM laser. |

4-2 PMC2 – SPI Laser Pin Assignment

4-2-1 Serial Mode (RS-232)

When you choose the driver of [SPI_Fiber.cfg], the pin assignments of PMC2 and SPI G3 Laser are as below:

| PMC2-JF2 (LASER_EXTENSION) | | | SPI G3 Laser (68 pins) | |
|----------------------------|---------------------|----------------------------|--------------------------|---------|
| Pin No. (26pins) | Pin No. (25pins) | Name | Descriptions | Pin No. |
| 1 | 1 | DAC Output | | |
| 3 | 2 | DAC Output | | |
| 5 | 3 | PWM 0 Output (TTL) | | |
| 7 | 4 | FPK & Current (DA) | | |
| 9 | 5 | Laser On/off (TTL) | Laser Emission Gate High | 5 |
| 11 | 6 | Leading Light On/Off (TTL) | | |
| 13 | 7 | Shutter (TTL) | | |
| 15 | 8 | CW Mode (TTL) | | |
| 17 | 9 | Lamp On/Off (TTL) | | |
| 19 | 10 | Digital Output 5 (TTL) | | |
| 21 | 11 | Digital Output 6 (TTL) | | |
| 23 | 12 | Digital Output 7 (TTL) | | |
| 25 | 13 | GND | Ground | 31 |
| 2 | 14 | GND | Laser Emission Gate Low | 39, 47 |
| 4 | 15 | GND | | |
| 6 | 16 | Start + | | |
| 8 | 17 | Start - | | |
| 10 | 18 | Stop + | | |
| 12 | 19 | Stop - | | |
| 14 | 20 | Program Ready Ext + | | |
| 16 | 21 | Program Ready Ext GND | | |
| 18 | 22 | Marking Ready Ext + | | |
| 20 | 23 | Marking Ready Ext GND | | |
| 22 | 24 | Marking End Ext + | | |
| 24 | 25 | Marking End Ext GND | | |
| PC-RS232 port (9 pins) | | | SPI G3 Laser (68 pins) | |
| Pin No. | Name | | Descriptions | Pin No. |
| 2 | TX | | RS-232_TX | 25 |
| 3 | RX | | RS-232_RX | 26 |
| 5 | GND | | Ground | 31 |
| 1、4、6、7、8 | NC | | | |

4-2-2 Hardware Connection Mode (HWI)

When you choose the driver of [SPI_Fiber_HWI.cfg], the pin assignments of PMC2 and SPI G3 laser will be as below:

| PMC2-JF2 (LASER_EXTENSION) | | SPI G3 Laser (68 pins) | | SPI break-out board | | |
|-------------------------------|---------------------|----------------------------|--|---------------------|---------------------|-----------|
| Pin No. (26pins) | Pin No. (25pins) | Name | Descriptions | Pin No. | Descriptions | Pin No. |
| 1 | 1 | DAC Output | Power-Amp Active-State Current Set Point | 65 | User_PWR_MOD_IN | J6 pin-7 |
| 3 | 2 | DAC Output | Power-Amp Simmer State Current Set Point | 64 | User_PWR_BIAS_IN | J6 pin-6 |
| 5 | 3 | PWM 0 Output (TTL) | External Pulse Trigger-High | 13 | User_EXT_TRIG_H | J7 pin-7 |
| 7 | 4 | FPK & Current (DA) | | | | |
| 9 | 5 | Laser On/off (TTL) | Laser Emission Gate High | 5 | User_Laser_Out_EN_H | J7 pin-1 |
| 11 | 6 | Leading Light On/Off (TTL) | | | | |
| 13 | 7 | Shutter (TTL) | | | | |
| 15 | 8 | CW Mode (TTL) | | | | |
| 17 | 9 | Lamp On/Off (TTL) | | | | |
| 19 | 10 | Digital Output 5 (TTL) | | | | |
| 21 | 11 | Digital Output 6 (TTL) | | | | |

5. IPG Laser Settings

5-1 IPG Laser – Program Settings(Also apply for Raycus and JPT Laser)

If you want to use MarkingMate software to control IPG Laser, you have to do the right program settings first, please follow the below steps.

Execute the program DM.exe under the directory of C:\Program Files\MarkingMate, a dialogue box will be displayed as below. Choose the PMC2 of Driver Name and choose the suitable cfg according to the following table, and then click [OK] button.

| | |
|--------------------------|------------------------------|
| IPG_Fiber.cfg | For IPG Laser |
| IPG_Fiber_RS232.cfg | For RS232 control IPG Laser |
| IPG_GLPM.cfg | For IPG GLPM Laser |
| IPG_YLP_B.cfg | For IPG YLP-B Laser |
| IPG_YLPM.cfg | For IPG YLPM Laser |
| raycus.cfg | For Raycus Laser |
| JPT_YDFLP_10_20.cfg | For JPT YDFLP 10-20 Laser |
| JPT_YDFLP_20_DP1_S.cfg | For JPT YDFLP 20-DP1 Laser |
| JPT_YDFLP_20_DP1_S_L.cfg | For JPT YDFLP 20-DP1-S Laser |
| JPT_YDFLP_20_PRO_S_L.cfg | For JPT YDFLP 20-PRO-S Laser |

5-2 PMC2 – IPG Laser Pin Assignment

5-2-1 IPG_Fiber.cfg Mode

When you choose the driver of [IPG_Fiber.cfg], the pin assignments of PMC2 and IPG laser will be as below:

| PMC2-JF2 (LASER_EXTENSION) | | | IPG Laser (25 pins) | |
|----------------------------|---------------------|----------------------------|-----------------------------|---------|
| Pin No. (26pins) | Pin No. (25pins) | Name | Descriptions | Pin No. |
| 1 | 1 | DAC Output | | |
| 3 | 2 | DAC Output | | |
| 5 | 3 | PWM 0 Output (TTL) | Pulse Repetition Rate Input | 20 |
| 7 | 4 | FPK & Current (DA) | | |
| 9 | 5 | Laser On/off (TTL) | Laser Modulation Input | 19 |
| 11 | 6 | Leading Light On/Off (TTL) | [2]Guide Light On/Off | 22 |
| 13 | 7 | Shutter (TTL) | | |
| 15 | 8 | CW Mode (TTL) | | |
| 17 | 9 | Lamp On/Off (TTL) | | |
| 19 | 10 | Power Saving Mode (TTL) | | |
| 21 | 11 | MO (TTL) | [1] MO On/Off | 18 |
| 23 | 12 | Digital Output 7 (TTL) | | |
| 25 | 13 | GND | | |
| 2 | 14 | GND | | |
| 4 | 15 | GND | | |
| 6 | 16 | Start + | | |
| 8 | 17 | Start - | | |
| 10 | 18 | Stop + | | |
| 12 | 19 | Stop - | | |

6. OMRON Laser Settings

6-1 OMRON Laser - Program Settings

If you want to use MarkingMate software to control IPG Laser, you have to do the right program settings first, please follow the below steps.

Execute the program DM.exe under the directory of C:\Program Files\MarkingMate, a dialogue box will be displayed as below. Choose the PMC2 of Driver Name and choose the suitable cfg according to the following table, and then click [OK] button.

6-2 PMC2 – OMRON Laser Pin Assignment

When you choose the driver of [OMRON_Fiber.cfg], the pin assignments of PMC2 and OMRON laser will be as below:

| PMC2 P2 (D-SUB 15M 3 Raw) | OMRON I/O Port (D-SUB 15M) |
|---------------------------|----------------------------|
| 6 LASER ON | 5 LASER ON H |
| 15 GND | 6 LASER ON L |
| 10 LAMP | 7 LD ON H |
| 15 GND | 8 LD ON L |

PS : OMRON RS-232 Serial Port has to connect to RS-232 Port on PC.

7 Using RS-232

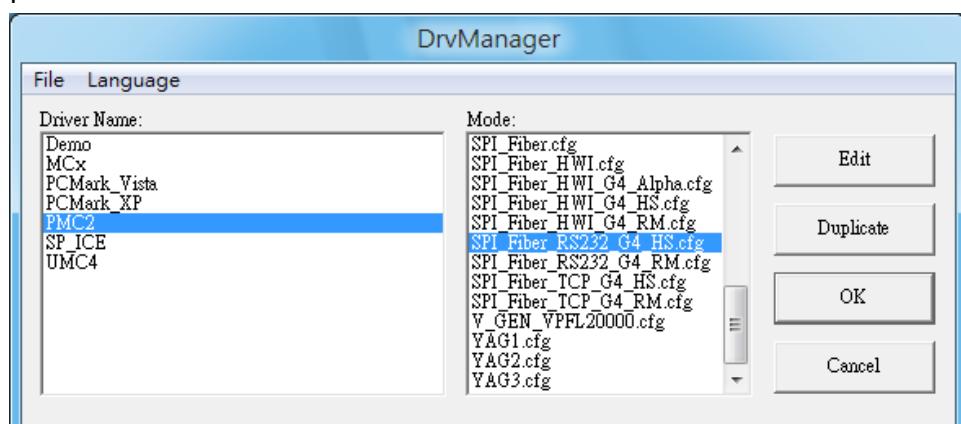

7-1 What is RS-232

RS-232 is a kind of serial port. Common type of RS-232 connector is 9 pin D-Sub.

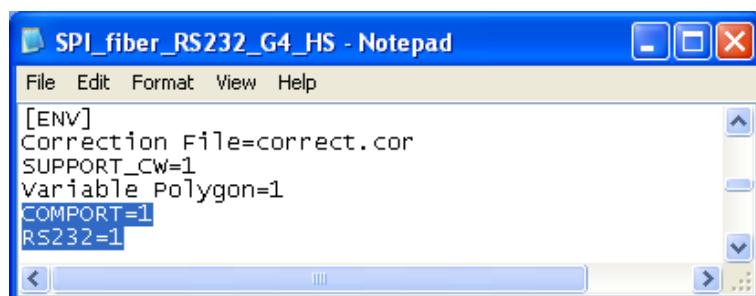

Some kinds of laser types needed to control by RS-232 port for tuning laser parameter, such as power percentage, frequency...etc.

7-2 Setting to use RS-232 to control laser

Take SPI G4 HS laser controlled by RS-232 as example. After user has executed \MarkingMate\DM.exe , chosen PMC2 at Driver Name column, and picked SPI_fiber_RS232_G4_HS.cfg at Mode column, to apply the setting by clicking OK. The location of cfg file is \MarkingMate\Drivers\PMC2\cfg\. Refer to the following picture:

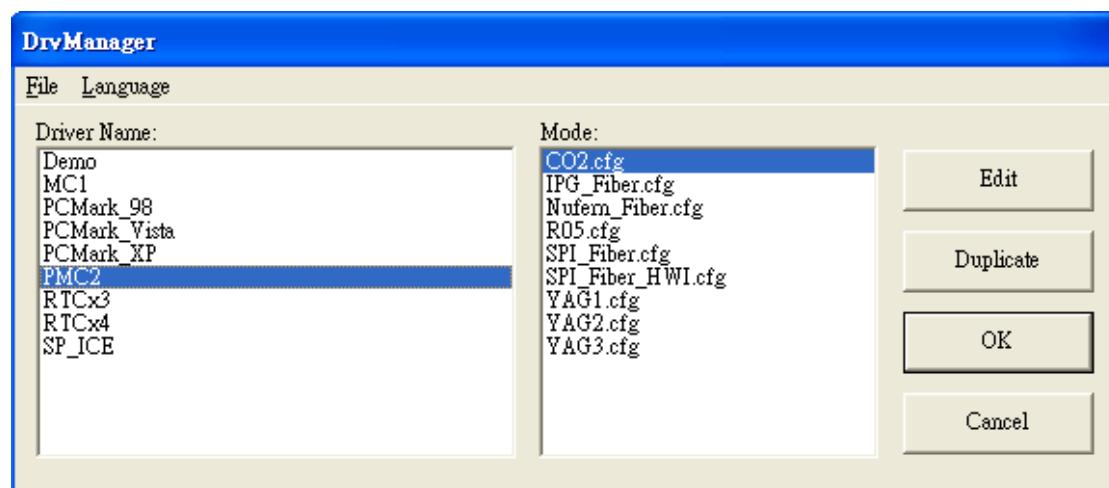

Open the given file by favorite text editor. There should be two instructions under [ENV] sector, such as RS232=1 and COMPORT=XXX. RS232=1 means control laser by RS-232. XXX within COMPORT=XXX means the using Com Port number. Default value is 1 which means using COM port 1 to control laser. Manually change this value to assign other port if necessary.

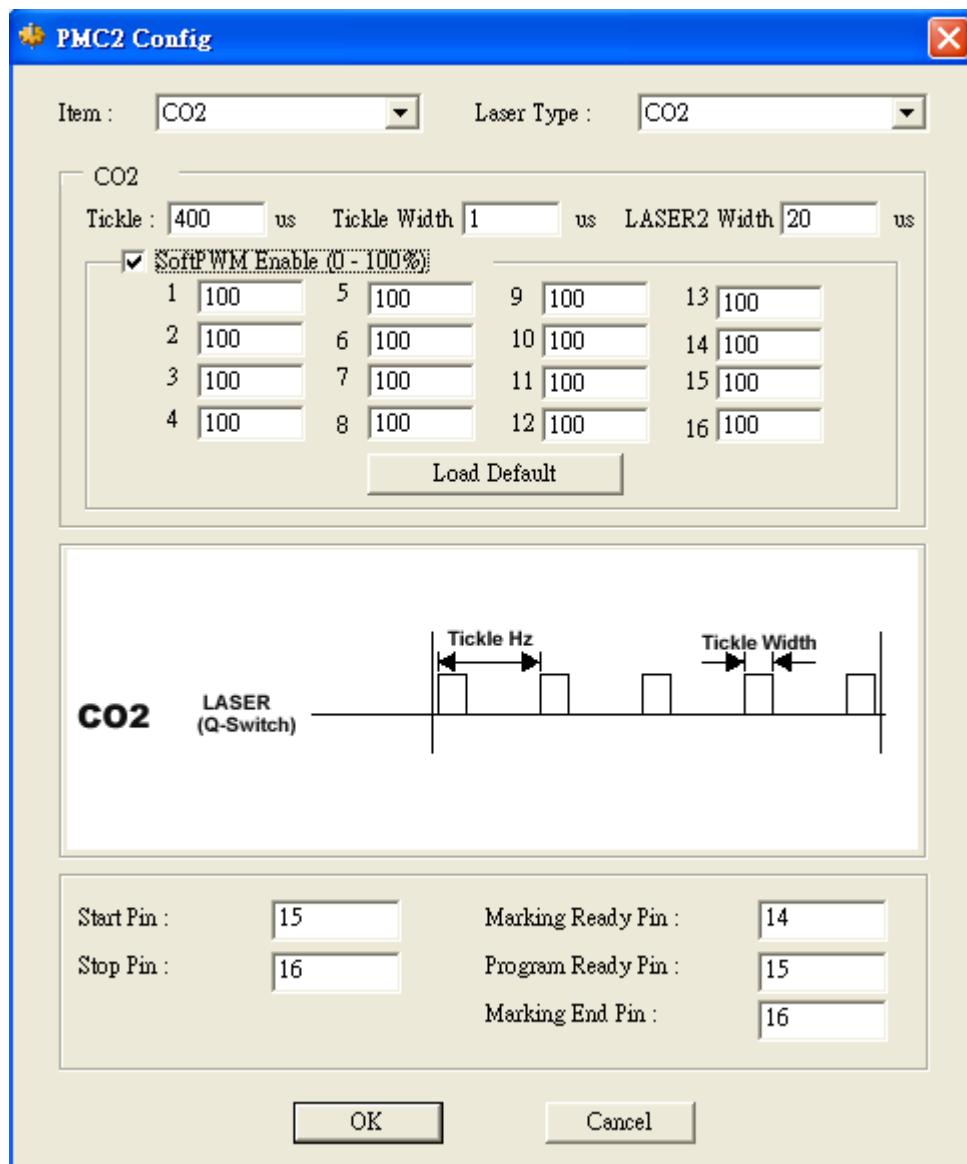

Appendix I: Laser Mode Settings

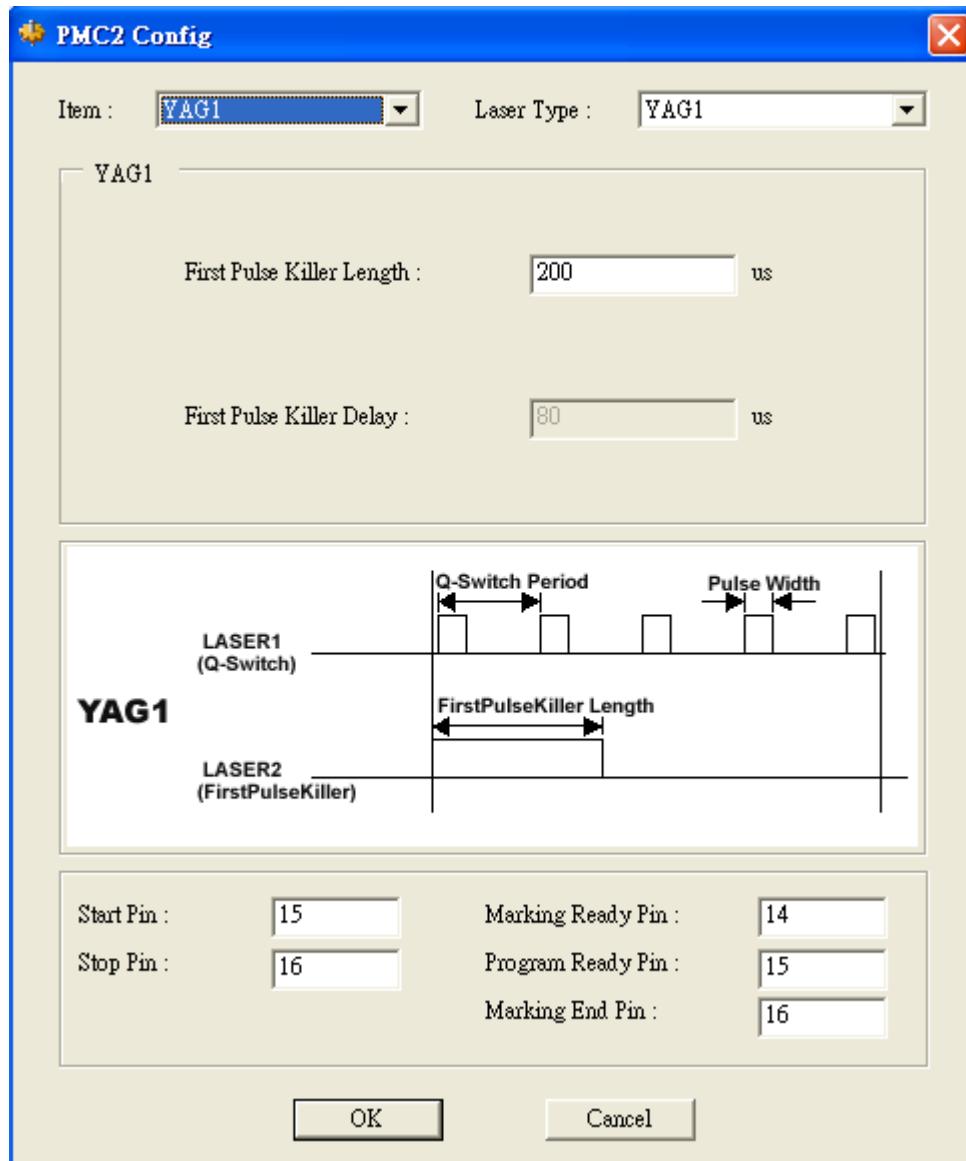

After installation of MarkingMate, you have to be in the file of C:\Program files\MarkingMate\Drivers\PMC2\config.ini to implement a setting up action. You can also click from [Start] – [All Programs] – [MarkingMate System] – [Driver Manager] to open a dialogue box as below. Please note that you can not execute the config.ini and MarkingMate program at the same time. Therefore, before the setting up action, you have to close the MarkingMate software first.

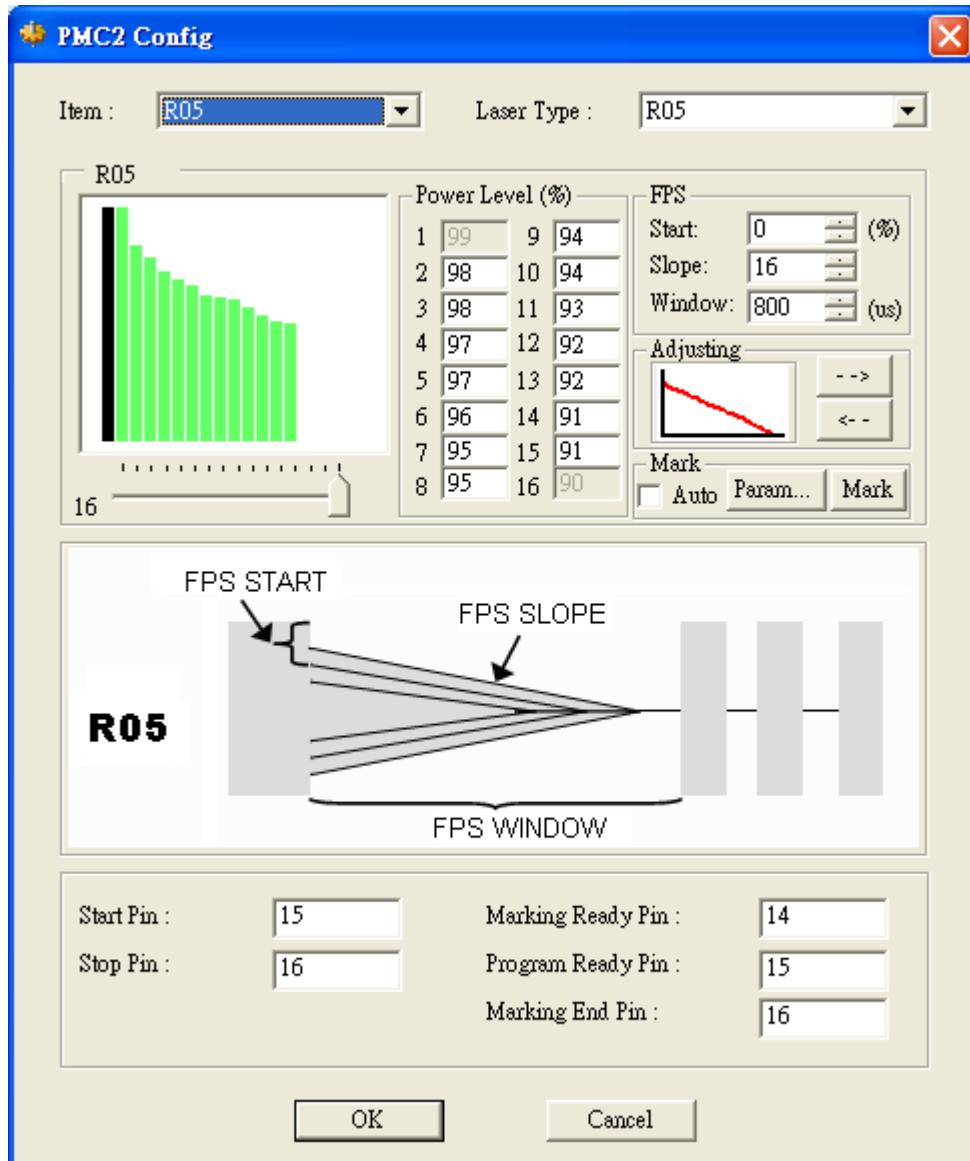

Select the [PMC2] driver and choose [CO2.cfg] or other modes you want and then click [Edit] button:

The CO2 laser settings will be as above. You can modify the tickle values and enable SoftPWM function to control the first 16 outputs of the laser.

If you choose YAG1 or YAG2 mode as above, you can adjust the length of [First Pulse Killer]. When you choose YAG3 mode, you can even adjust the length and delay values of [First Pulse Killer] to meet your requirements.

For the R05 mode as above, you can adjust the power level for the first 16 points (see the waveform in the window). Click the direction button can also see the change of waveform. To make sure the setting is OK or not, please click [Mark] button to see the mark result. The system will mark a fill rectangle for examination. The parameters of this rectangle can be adjusted by clicking the [Param...] button as below. If users checked the [Auto] checkbox and then click [Mark] button, the system will repeat the mark action automatically until unchecked [Auto] or press [ESC] button.
